March 5, 2014

Dear Mr Šošin,

RVTest OÜ is writing to thank Dontal OÜ for the successful working relationship that the two companies built up during the cooperation for the project to supply jet fuel for NATO ISAF in Afghanistan between 2012 and 2013.

During that period the specialists of both companies performed various operations on rail tank cars (RTC-s), while following the strict requirements to prepare RTC-s for transportation of such a particular fuel as the Jet A-1. RVTest OÜ specialists performed a variety of works to guarantee that the RTC-s' technical parameters were according to the relevant regulations for transport of RTC-s. On the other hand, Dontal OÜ specialists were responsible for the internal preparation of RTC-s for transportation of Jet A-1, namely, the painstaking cleaning of the interior of the RTC-s, including degassing. Jet Petro Clean equipment was used to produce results of highest quality, this also helped Dontal OÜ to secure that the results of the various cleaning procedures were of the highest quality.

Throughout the cooperation between our companies, RVTest OÜ can confirm that the personnel of Dontal OÜ showed utmost care and awareness of the importance of handling the tasks at hand with as much as detail as possible. In a business where time cannot underplay quality, Dontal OÜ was able to keep up with indeed a very tight schedule and fulfilling all the tasks put before them punctually.

We are of the opinion that the service Dontal OÜ provides is up to the highest of professional standards out there. RVTest OÜ is definitely hoping to further the cooperation between the two companies, because we are certain of Dontal OÜ's ability to produce only the best results.

Yours Sincerely

Aleksei Balõbin
